

PRESS RELEASE
FOR IMMEDIATE RELEASE

*Amarillo workshop will examine
stewardship of antimicrobial drug use in livestock*

OAK BROOK, IL July 29, 2015: Stewardship of medically-important antimicrobial drugs in food animals is the subject of workshop targeted to livestock producers, their feed suppliers and veterinarians in five states of the Southern Plains of the United States. The workshop will be Sept. 11, 2015 at the Texas A&M AgriLife Research Extension Auditorium, 6500 Amarillo Blvd. West, Amarillo, TX.

This free workshop is an opportunity for participants to gain a comprehensive understanding of two Guidance for Industry (GFIs) issued by the U.S. Food and Drug Administration (FDA) regarding the use of medically-important antimicrobial drugs in food-producing animals, as well as the FDA's revised [Veterinary Feed Directive](#) (VFD). The workshop is also an opportunity for other stakeholders, such as state and federal agencies, colleges of veterinary medicine and university extension personnel, to gain insights into the changes needed to meet the requirements.

Lead by Farm Foundation, NFP, this workshop is targeted to pork, cattle, poultry and sheep producers, veterinarians and feed suppliers in Texas, Eastern New Mexico, Oklahoma, Kansas, and Southeastern Colorado. Advance registration is requested and can be completed [online](#). This is one of 12 regional workshops Farm Foundation will host across the nation in the next three months. A complete list of workshop locations is available on the [Farm Foundation website](#).

The Sept. 11 workshop will include presentations by producer leaders, the local veterinary community, and representatives from the regional feed industry. Officials from FDA and USDA's Animal and Plant Health Inspection Service (APHIS) will also participate. A major part of the agenda is designated for producers, veterinarians and feed suppliers to identify and discuss the management challenges ahead.

To gauge awareness of the changes being put in place by FDA on the use of medically-important antimicrobial drugs in food animals, Farm Foundation, NFP is asking stakeholders to complete a brief survey. The survey is also intended to learn more about the potential implications of these changes. The survey is open to all livestock producers, feed suppliers and veterinarians, whether or not you attend a workshop. [CLICK HERE](#) to complete the survey. Survey results will only be gathered and reported in the aggregate. Survey results will be shared with workshop participants.

Comments gathered at the 12 workshops will be compiled in a report assessing the economic and physical challenges facing producers as they implement the new provisions in the GFIs and revised

VFD. Informational and educational needs will also be evaluated, as well as the role of veterinarians in monitoring and managing antimicrobial drug use.

Farm Foundation will convene a national summit in late fall 2015 for farmers, ranchers, feed suppliers, veterinarians, academics and government agency staff to address the issues identified in the regional workshops. This will also be an opportunity to advance the conversation on the industry's adaptation to the changing landscape of antimicrobial drug use.

Many producers and businesses across the entire food and agricultural value chain have already taken action to reduce the use of medically-important antimicrobial drugs in food animal production. FDA's [GFI 209](#) and [GFI 213](#) call on animal drug sponsors of approved medically-important antimicrobials administered through medicated feed or water to remove production uses (i.e., to promote growth or improve feed efficiency) from their product labels, and bring the remaining therapeutic uses of these products—to treat, control, or prevent disease—under the oversight of a veterinarian by the end of December 2016. Manufacturers of products containing these medically-important antimicrobial drugs have voluntarily agreed to submit changes to their product labels to comply with the GFIs. FDA also revised the [Veterinary Feed Directive \(VFD\)](#) to facilitate the increased veterinary oversight of medicated feeds called for by GFI 209 and 213. By the end of 2016, administration of these products to food-producing animals will be restricted to use by or on the order of a licensed veterinarian.

Successful adaptation to the policy changes is critical to public and animal health, ensuring consumer confidence in food safety and the future viability of animal agriculture in the United States. “The success of achieving this goal—for both public health and the economic health of animal agriculture—hinges on producers having access to the information they need to adjust production practices, and the capacity of veterinarians to provide the additional oversight needed,” says Farm Foundation President Neil Conklin. “As an organization respected for its objectivity, Farm Foundation is well positioned to quickly respond to this informational need and draw relevant and diverse stakeholder groups to the table for constructive discussions on this important topic.”

In addition to Farm Foundation's leadership, individual producers and many companies are providing financial support for this educational effort. These include JBS United, Hormel Foods Corporation, Jennie-O Turkey Store, Rose Acre Farms, Elanco Animal Health, J.R. Simplot Company and North American Meat Institute. The staff of Adayana Agribusiness Group will facilitate the workshops.
